

CLAIRE

AGE : 14 YEARS

DANIEL ISLAND, SC

B-CELL ACUTE

LYMPHOBLASTIC LEUKEMIA

Meet Claire, a 8th grader who was diagnosed with B-Cell Acute Lymphoblastic Leukemia in August of 2019

Claire is a energetic, loving and amazingly kind 14-year-old 8th grader at Christ Our King Stella Maris Catholic School.

Claire was diagnosed with B-cell Acute Lymphoblastic Leukemia on the eve of her brother's 15th Birthday, August 8, 2019. We realized Claire was battling something bigger than her opponent when this strong, attacking center midfielder was winded on the field.

When she isn't on the soccer pitch (which she almost always is) she can be found watching her favorite premier league team, Manchester City, on the telly, playing futsal in the garage, having a family basketball tournament, surfing the waves at Sullivan's, playing soccer tennis with her friends, taking her two furry companions on a walk or learning new songs on her guitar.

While Claire has been through excruciating front-line chemotherapy treatment these past 17 months and will not complete treatment until December 3, 2021, her big smile, positive attitude and determination keep her focused on the finish line.

Claire is "kicking cancer" and thanks to the love and support of our friends, family, the incredible Doctors and Nurses at Shawn Jenkins Children's hospital and people like YOU she is able to!
